

Tetric

A Console-Based Tetris Game

Student: Md. Shourov (BSSE-1609)

Supervisor: Toukir Ahammed

Project Goal

The goal of this project is to make a console version of the classic puzzle game Tetris.

The game will run fully inside the console window and allow the player to move and rotate falling blocks to form complete lines.

It focuses on building all main parts of the game clearly and efficiently.

Project Overview

- 🧩 Tetris is a puzzle game where different shapes fall from the top of the screen.
- ↔️ The player can move and rotate these shapes to fill up rows.
- ★ When a row is completely filled, it disappears, and the player gets points.
- ⊘ If the blocks reach the top of the screen, the game ends.
- ⏩ The game becomes faster after some time to make it more challenging.

Player Controls

W → Rotate the block

A → Move left

S → Make the block fall faster

D → Move right

Key Features

- ✓ Random shape generation
- ✓ Line detection and clearing
- ✓ Scoring and high score saving
- ✓ Speed increase with levels
- ✓ Game over detection
- ✓ Simple keyboard control

Tools Used

 **Programming Language: C**

 **IDE: Visual Studio Code**

 **Version Control: GitHub**

Conclusion

This project will create a playable Tetris game on the console.

It will help to understand programming concepts like loops, arrays, and file handling.

The project also shows how game logic and user interaction can be managed efficiently in C.
